

# NOMINET

Technology can provide unlimited opportunities for young people, but it can also leave people behind. Growing up in the digital era can make young people more vulnerable than they were before, and it can empower them. It can increase connections, and it can isolate. In a society that is increasingly digital by default, it is essential that young people have the access, the skills, and the confidence to find their place in the digital age.

At Nominet, we care about making the UK namespace the safest, most secure place for young people to engage with the internet. We do this by staying true to our three core pillars; **Connected**, **Inclusive** and **Secure**.

## CONNECTED

In the UK, 1 million young people do not have appropriate, affordable access to the internet and hardware, which considerably limits their educational growth and opportunities. Our Connected programmes work to ensure young people have access to a life online. This includes essential digital services that address the needs of young people when they are at their most vulnerable.

# #RESET

## Mental Health Programme

Young people experiencing mental health challenges could receive better support than they do currently, particularly on digital channels. Our #RESET Mental Health Programme directly supports expert national charities looking to deliver digital mental health services, and sector-wide initiatives that boost collaboration, service quality and signposting for young people.

## INCLUSIVE

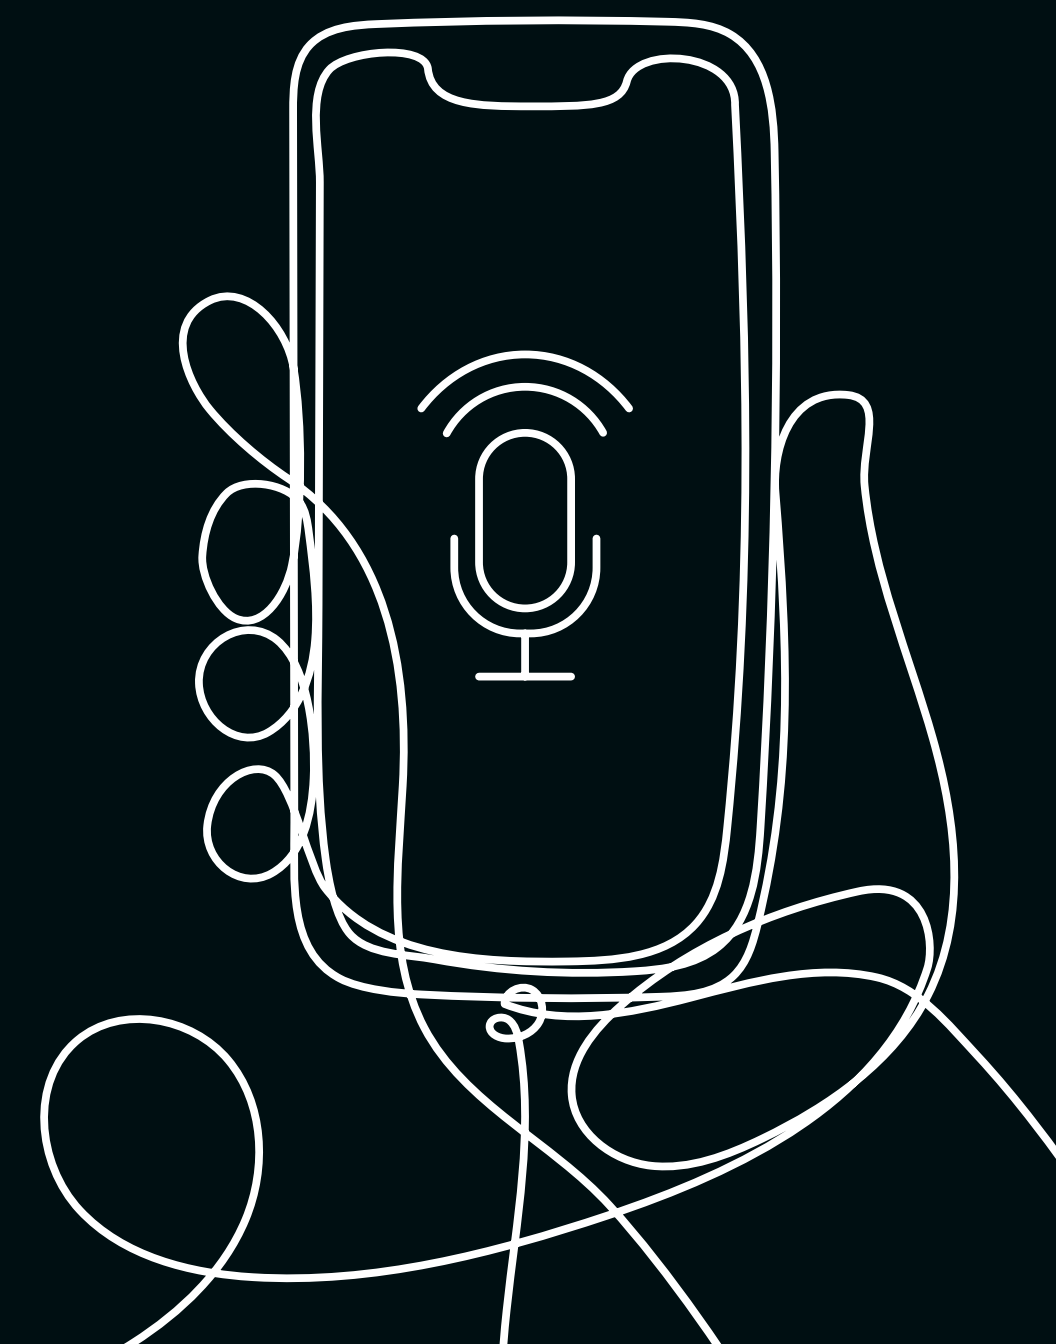

The future of work is going through transformational change. Having a strong foundational understanding of digital skills for employability and entrepreneurship is essential to every young person's chance of succeeding in the future economy. Our Inclusive programmes support young people in digital, particularly those who are most likely to be left behind in a society that is digital by default.

**Scouts** 

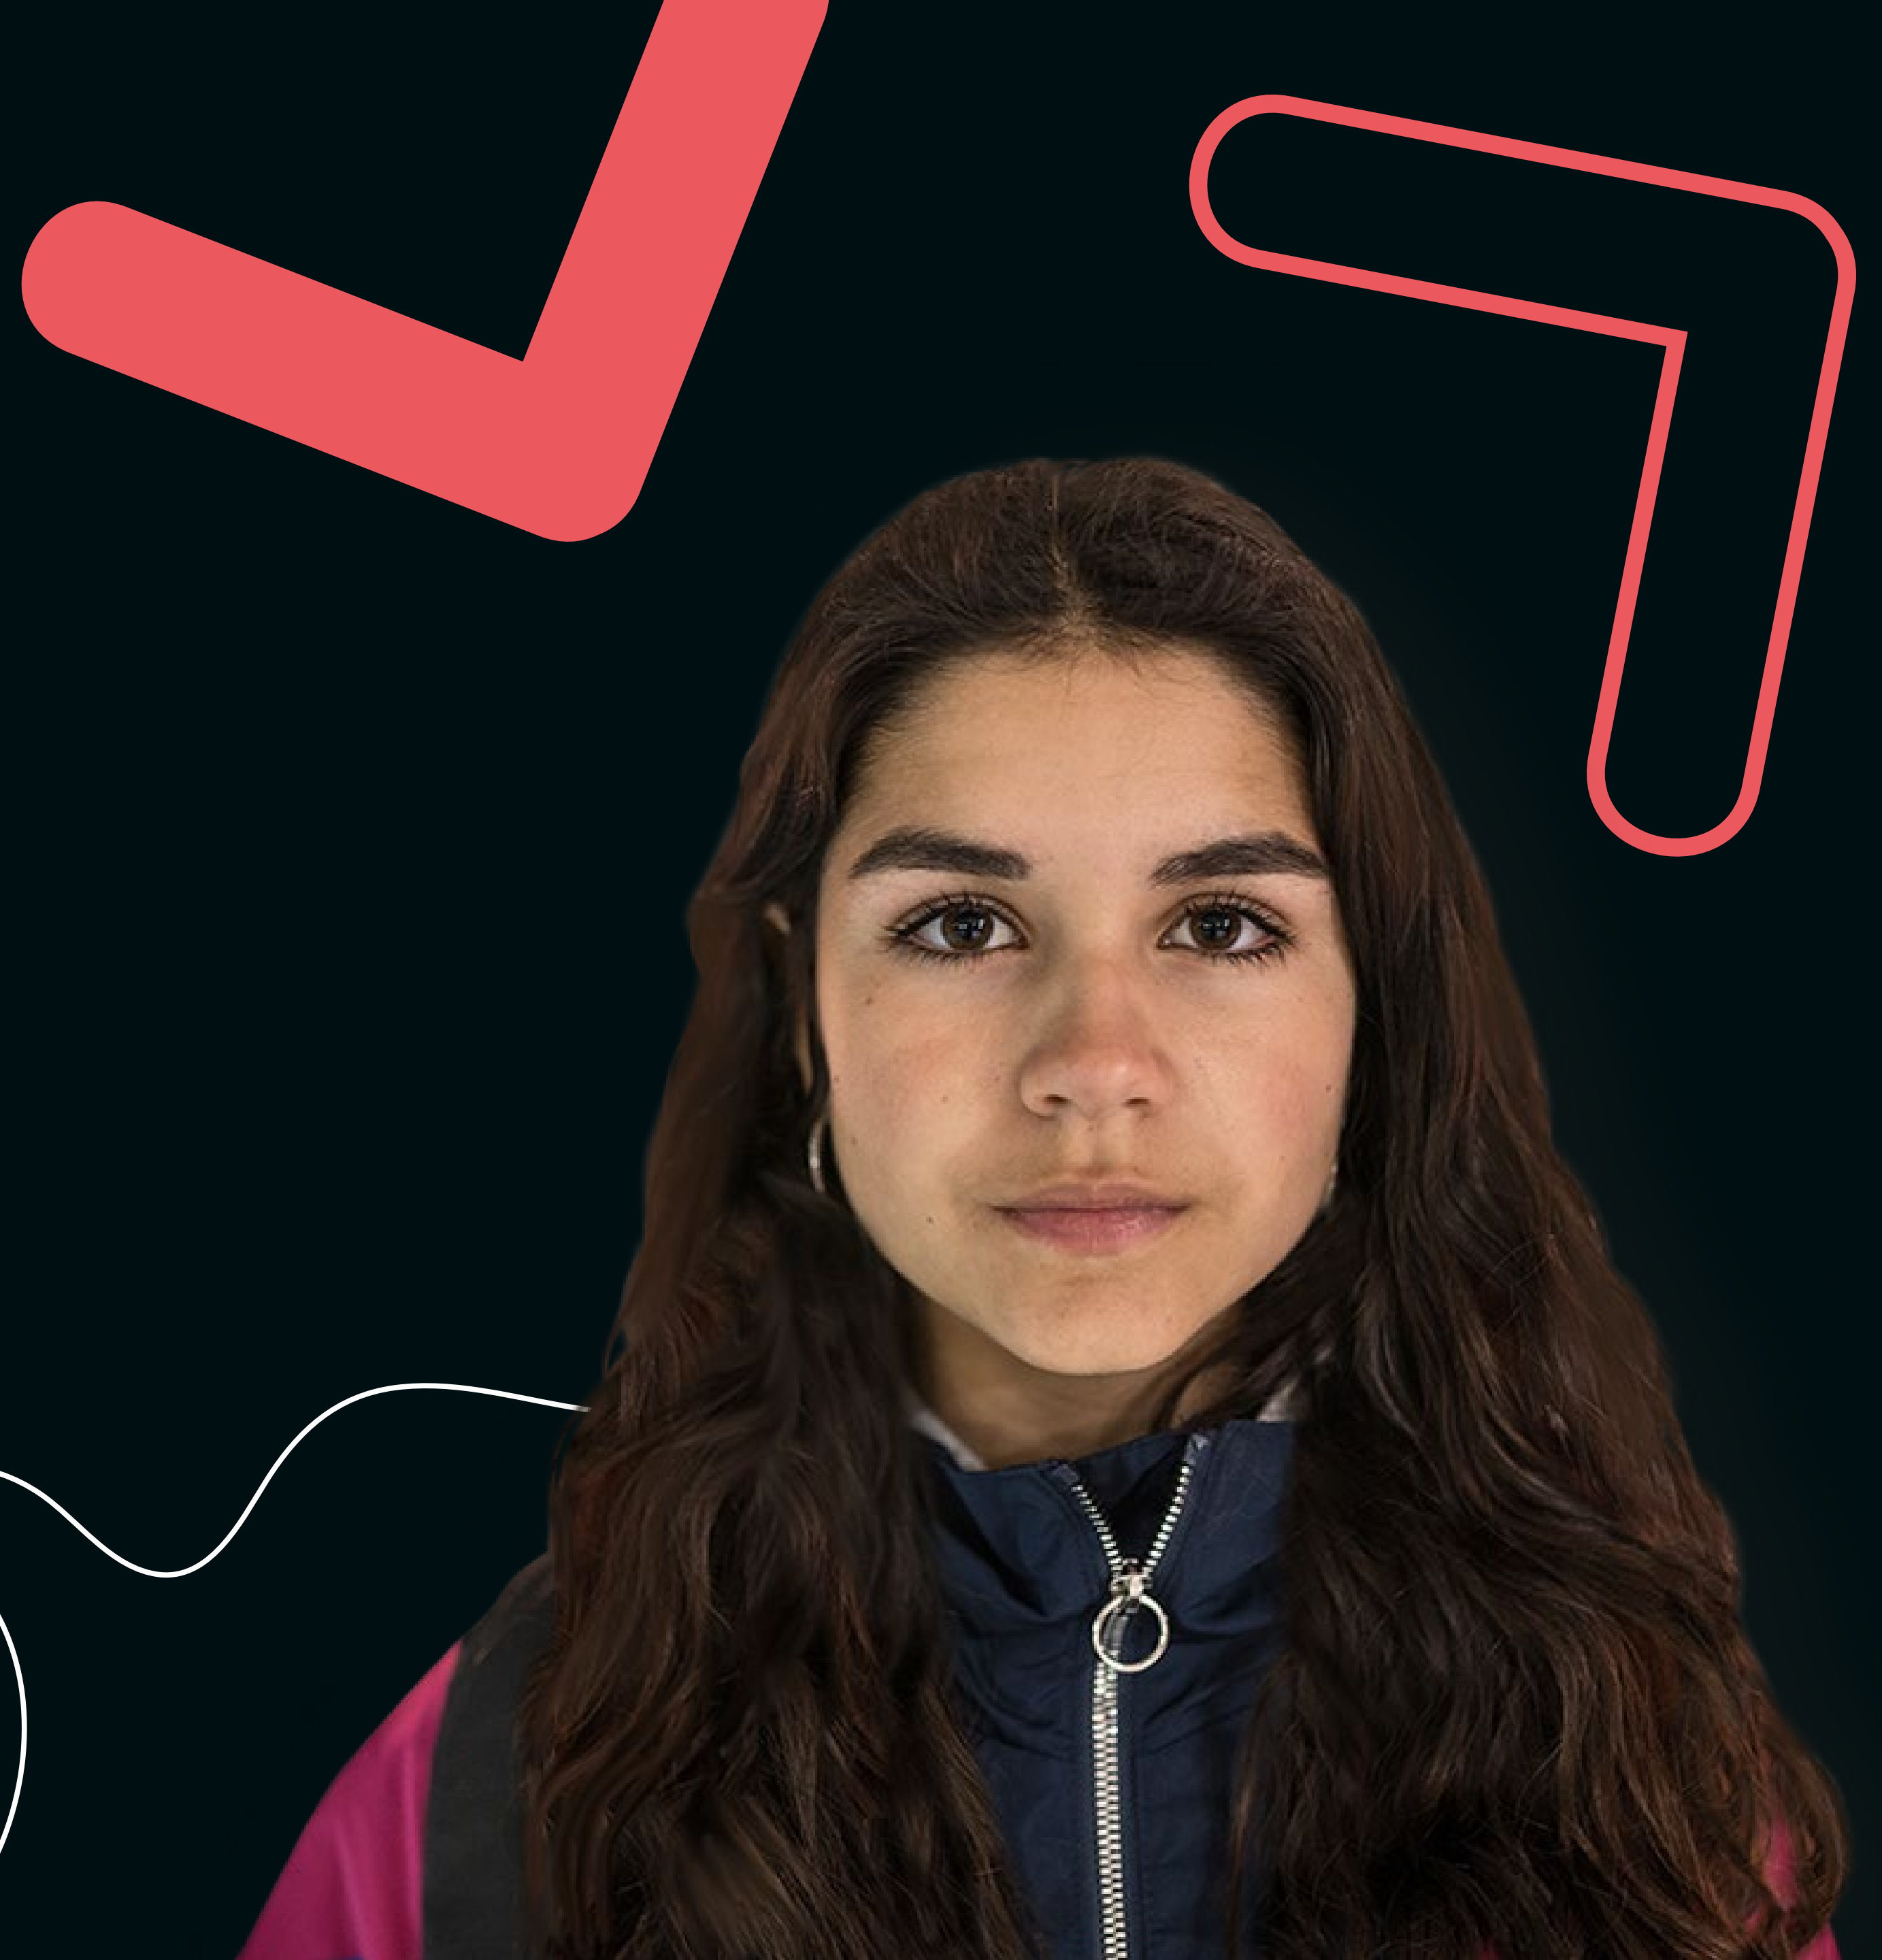

## SECURE

Our Secure programmes focus on ensuring that young people are safe online. We support research, initiatives and programmes that prevent, respond and eradicate practices that put young people at significant risk online. We also support organisations that help young people form safe and positive relationships online.

Our work feeds into many aspects of youth digital engagement and support. From foundational education systems development to treating and resolving issues at the surface-level, our programmes address social issues to generate the maximum opportunity for young people to build the skills and knowledge they need to succeed in an increasingly digital world.

## Countering Online Harm

## Online Safety Programme

The Online Safety Programme aims to equip young people with the skills to help them navigate the challenges posed by being online and improve the safety of young internet users through programmes in schools, supporting organisations to further develop their activities in this area.

1000000

**+ MORE**

**With our partners, we improved over one million young lives last year through technology.**

**We look forward to doing more in the future to help people find support when they need it the most.**
